

Orchestrating an interoperable sovereign federated Multi-vector Energy Data Space built on open standards and ready for GAia-X

The aim of OMEGA-X is to implement a Data Space (based on European common standards), including federated infrastructure, data marketplace and service marketplace, involving data sharing between different

stakeholders and demonstrating its value for real and concrete Energy use cases and needs, while guaranteeing scalability and interoperability with other Data Space initiatives, not just for energy but also cross-sector.

This project has received funding from the European Union's Horizon Europe Framework Programme under Grant Agreement No. 101069287
